

Customer Journey

1. Order Mavim Products

• The customer can order Mavim Products

3. Identity Management & Federation

 Based on the type of identity management systems that the organization uses, SSO can be enabled for the application.

4. License Management

 Assign and manage licenses across the Mavim platform for each product

7. User-guided journey

 A context-based user tour to guide the user through the self-service Mavim Connect Center.

2. Provisioning and Deploy Mavim Products

- Once the Mavim products are ordered, products are automatically deployed to the customer environment
- Additionally, new databases and instances can be provisioned upon request from the Mavim Connect Center.

5. Access Management

- Centrally manage access to all databases in the Mavim platform
- Ability to assign administrators and users to the databases

6. Publication Rights

 Centrally manage publication rights to the Mavim Portal from the Mavim Connect Center

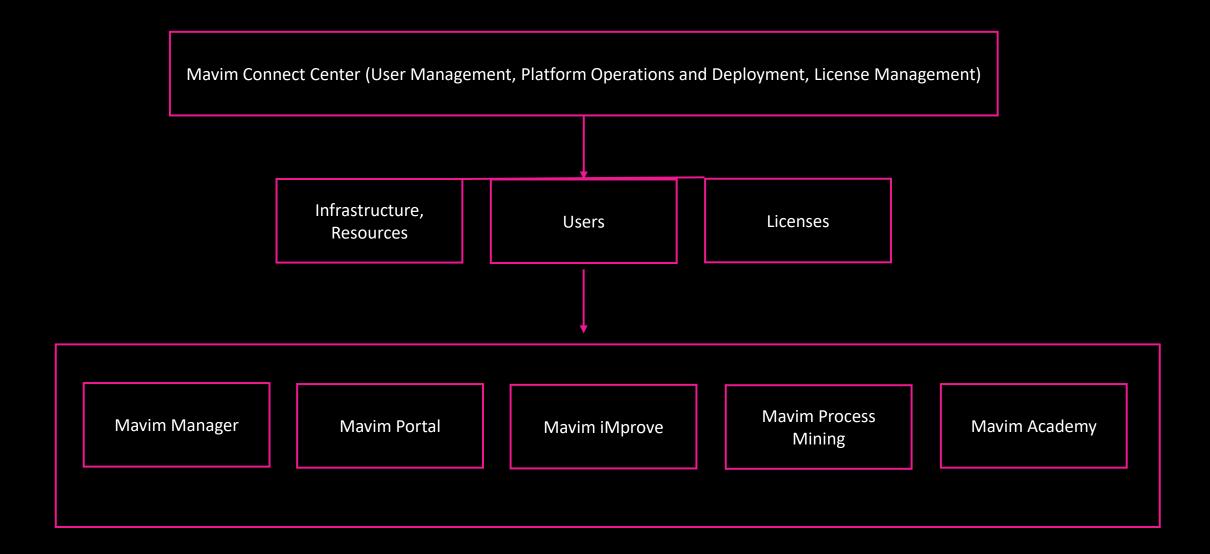

Vision and Mission

ONE PLATFORM

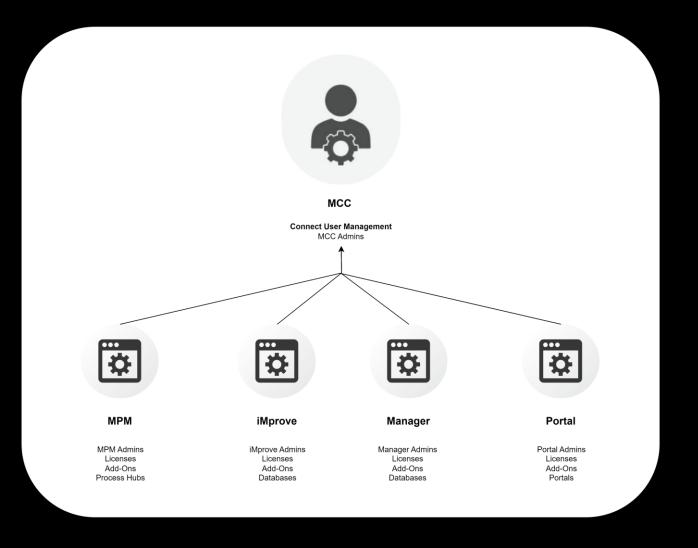

MCC 2.0: User Management and License Management

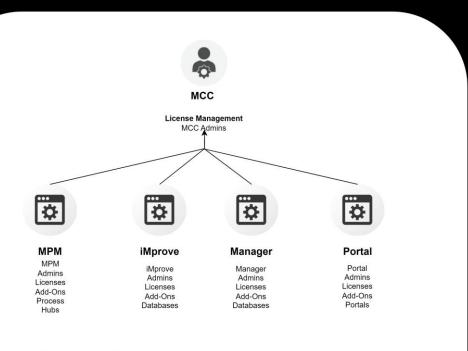

User Management (Connect)

License Management

License Management APIs

licenses/me - User Level API that provides the details of the Licenses, Add-Ons and the Resources assigned to the User

licenses/all - Company Level API that provides the details of the Licenses, Add-Ons and the Resources allocated to the Company

resources/update - Company Level API that updates the details of the Resources used by the Company
